GrOwnValve – Anchoring mechanism for a personalized, autologous heart valve for children

SUMMARY

The aim of the project is the production and testing of an anchoring mechanism of a personalized, autologous heart valve for children enabling growth in a once-in-a-lifetime point-of-care minimally invasive implementation. The novel anchoring mechanism facilitates placement of the valve without hindering growth of valve and vessel. For babies born with a congenital heart valve defect there is no dedicated child valve on the market. Instead they often receive xenogenic animal valves which degrade over the following years urging for risky open-heart re-surgery.

PROJECT GOALS

• Perform preclinical testing of anchoring mechanism together with the valve
• Prepare phase II clinical trial in children

LONG-TERM GOALS

• CE certification as a medical device

PREVIOUS SPARK FUNDING

• I4H 2019
